## PROJECT: EXPENSIFY

---

IT314 – SOFTWARE ENGINEERING  
GROUP 26

### **Part of requirements not complete/implemented in the project**

We were not able to implement a system where we could have a parental access over a user below the age of 18 years as we could not build a system where we could have some restricted permissions for some set of logged users.

We were not able to implement the language preference system as we proposed instead we imposed a currency preference for the ease of global standards and conversions

We could not implement a generative recommendation which our model would propose to the user based on their previous transactions logged in within our database
